

Where You Want The Sound You Want

Liverpool cathedral

Smartvox

The Smartvox is a passive powered column that takes 100/70 and 50Volt line signals. Power rating is 50/25 or 12,5 Watt. By applying specific filtering on the 21-individual sources, the output beam/lobe is tilted down-

wards with 12 degrees. This makes it possible to put the unit flat against the wall. Architects love it because they will see no

annoying shadows caused by the tilted column. In that perspective the unit does not reflect energy from the back wall into the upper areas. This results in a 3dB lower artificial reverberation and 3 dB more direct field. 3+3=6dB more direct field, means you can use the unit up to 25mt with 3 dB variation. Typical applications are churches but also auditorium where speech intelligibility is a must.

It is simple to install, height 1.20mt, and flat against the wall !
